How big is this, really?

One start. Many possibilities. No drawing experience needed.

Keep these four circles. What changes when you imagine the same marks at a different scale?

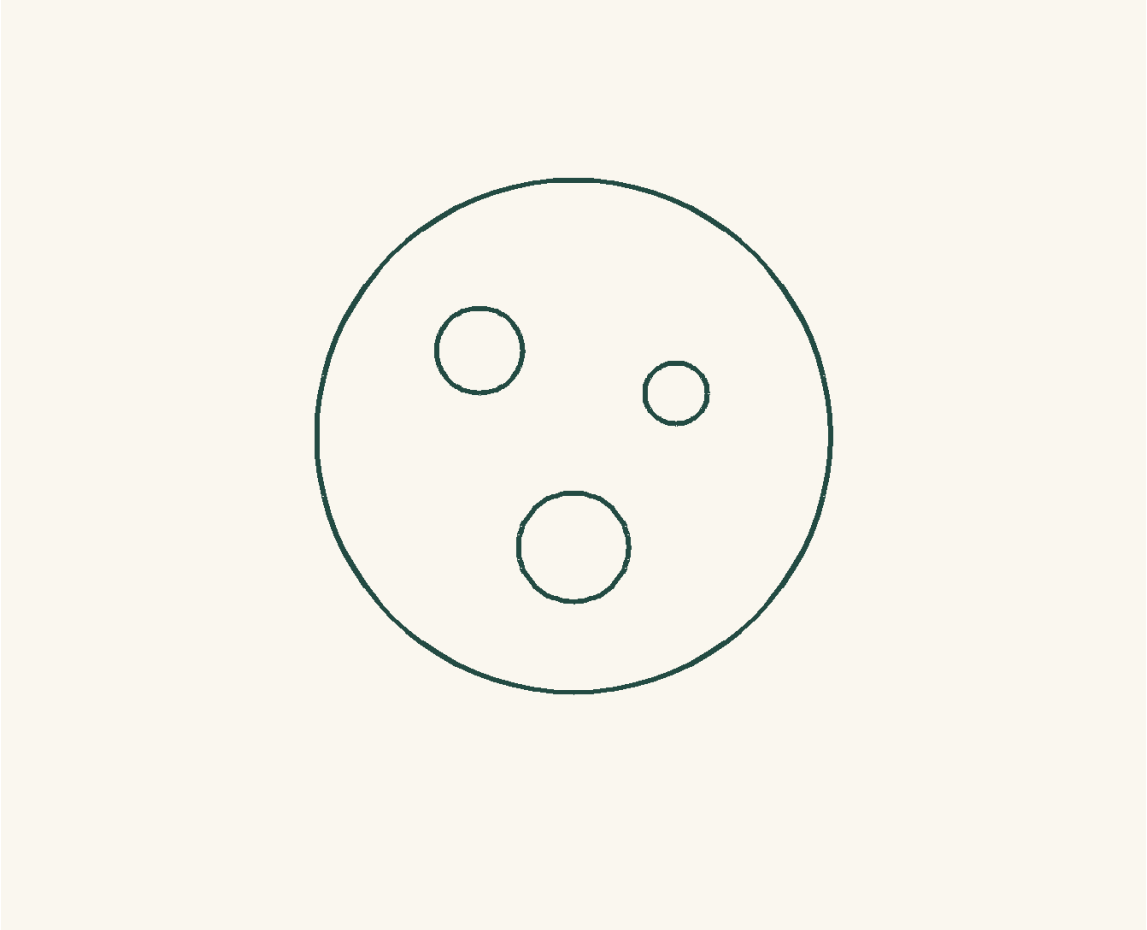
1. Keep all four original circles visible and in the same relative positions.

2. Add lines, colour, texture or collage; do not erase or cover a starter outline.

3. Rotate or uniformly resize the whole starter only. No independent movement of circles.

4. Imagine something smaller than a fingernail, something human-sized and something larger than a building. Develop one.

Try three ideas. Develop one. Add only three clues if you want a simple start.



What did you assume first? What changed when you looked again?

How big is this, really?

Your creative space - use this page for notes, a collage or a second possibility.

Reflect: What detail told you how big the scene was? Remove it mentally: does the scale change?

My first assumption:

A different explanation that could also fit:
