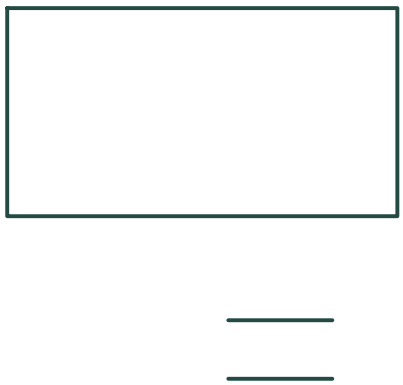
Whose eyes are these?

Keep the rectangle and two short parallel lines. Imagine the scene through an unusual observer's eyes, then add clues that show where the observer is and what they can see.

Keep every original mark visible and in the same relative position. Rotate or uniformly resize the whole starter only.

Imagine three ideas, then develop one. Rough sketches and written ideas are welcome.



Reflect: Where is your observer, and what can they see that someone else cannot?

Another possibility

Challenge 07 / Whose eyes are these?

My first assumption:

What changed when I looked again?

Starter description: A wide rectangular outline sits above the centre. Two separate short horizontal lines, one above the other, sit below it, slightly to the right.
